

## Performance Results: Community Memorial Healthcenter

Measured from 7/1/09-6/30/10

Many factors contribute to a successful treatment. These charts show which factors this hospital scored especially well on. Each "✓" you see means the hospital scored better than the Q-HIP average for that measure. Overall, hospitals are meeting some high standards and the goal is to promote improvement each year.

<b>Angioplasty Measures</b>	
Heart Attack Diagnosis-to-Angioplasty time < 90 minutes	n/a
Local vascular complications	n/a
Patient prescribed cholesterol lowering drug (statin) at discharge	n/a
Mortality rate	n/a
<b>Heart Attack Measure</b>	
Medication to improve heart pumping	n/a
<b>Heart Failure Measures</b>	
Discharge instructions	✓
Heart chamber assessment	✓
Medication to improve heart pumping	✓
<b>Pneumonia Measures</b>	
Pneumonia vaccination	✓
First antibiotic given within 6 hours	✓
Influenza vaccination	✓
<b>Surgical Infection Prevention Measures (hip, knee, hysterectomy, and colon)</b>	
Preventive antibiotic given 1 hour before surgery	✓
Preventive antibiotic stopped within 24 hours after surgery	✓
Surgical patient received appropriate measures to prevent blood clots 24 hours prior to surgery and 24 hours after surgery	

\* - The facility did not have enough cases (25 minimum) to reliably calculate performance for this measure.

n/a - This facility does not perform this type of service or was not required to submit data.

X - This facility did not submit complete data for the measure.
